

Home Computer Setup

1) Create a back up of the entire **IEZW** folder on your main computer at the office. One method of doing this is:

- From the Primary Menu move your mouse to the lower left hand area of the menu, select the "BackUp" button.
- Check the option "**Free Byte**".
- Direct your output to your USB Jump drive or other removable media.
- Run the Back Up.

2) On your home computer, run the "**HOME Computer Install**" option from your latest EasyDent update CD. Follow the On Screen prompts.

3) Now you should have an EasyDent Home Icon on your desktop. Click this Icon.

4) Insert your office computer back up you created in step 1.

5) Next use the "FBZip Utility" button to point to your back up drive and open the EZWBACK.ZIP file.

6) Select the top toolbar "Actions" option. This should show a list of all the EasyDent files on your back up device.

7) Still under "Actions" select the "Extract files(s)".

8) Double click on the C: drive folder in the left hand window, you must be all the way back to the top and open the C: folder.

9) Have these 3 options checked:

- "**Extract All Files**"
- "**Overwrite existing files**"
- "**Use full path of files**"

10) Click the "OK" button, this should start the unzipping process and restore all your EasyDent files and programs to drive C:

11) When this completes, use the "EasyDent Home" Icon again.

12) This time select the "Start EasyDent at Home" option. Login as normal.

13) Steps 1 through 10 are only necessary one time. Once you have EasyDent installed on your home computer, you can use the Primary Menu "BackUp" button to restore your most recent office back up. After Restoring the back up, be sure and always use the "EasyDent Home" Icon to start up EasyDent on the home computer.
