Digital X-Ray & Oral Cameras

1) *EasyDent* has a direct link from patient screens to the most popular X-Ray and Imaging systems, including: **Apteryx, Dexis**, **EVASoft, Ezdent-i, Gendex, Kodak, Patterson, Schick, Suni, Sopro, Sota, Tiger View, XDR-Radiology, Visix,** and **VixWin.**

2) Typically, we can program a **Free Bridge** between EasyDent and most digital x-ray & oral Camera software systems.   Generally, vendors will provide specifications to program the bridge with their imaging system.

3) You can quickly and easily import any windows digital image file directly into the patients *EasyDent* Electronic Dental Record. As long as the image is a standard Windows format, or the imaging vendor software provides a device driver to view their file type. For example: exporting x-rays into a jpg type windows file.

4) Imaging Packages
No matter what type of x-ray or oral camera system you are using, as mentioned, above we provide a direct link to one of the most popular digital imaging packages; Tiger View. **https://www.televeresystems.com/**

5) Scan-X
You can use Apteryx Imaging, or Patterson Imaging, Apteryx Scan-X Twain Scanner Driver, or DataGrabber. Please talk to us before selecting which approach to use.
